Jitsi booklet

**Max-Planck-Institut
für Marine Mikrobiologie**

Jitsi is a collection of Open Source projects which provide state-of-the-art video conferencing capabilities that are secure.

- HD audio and video
- unlimited free meeting access for up to 100 participants at a time
- End-to End encryption
- Multiple participants can share their screen simultaneously and remotely control other desktops

Getting started

- The video chats are realized via **https://jitsi.mpi-bremen.de.**
- The video conference has to be started by an user of the MPI, please use the same credentials for that like you use it for your computer / for your email-account (username an password)
- You can invite any person to the video conference, they must not have an user account
- The system can be used with computers as well as mobile devices
- Attending via phone call is possible too
- The conferences are multi-user capable and can of course be protected with a password.

First steps

- you can create a conference on your computer and test it with your mobile phone to enter the conference
- you could do it via **https://jitsi.mpi-bremen.de** or alternatively by appending a room name to the address, for example: **https://jitsi.mpi-bremen.de/videokonferenzen-sind-toll.**
- At **https://chat.mpi-bremen.de** you will find an internal chat system that may be accessed by everyone with their MPI-Bremen account
- In the picture on the left you can see the graphical interface and an explanation of the icons that appear in a meeting
